The Yellowstone-Tongue River wide planning organization is the vehicle for a water quality project that includes Carter, Cutler, Fallon, Tongue River, Broadus, and Treasure County and the Nez Percé Indian Reservation. The project will be developing a program designed to maintain the quality of the river and the groundwater within the area. Parts of a water quality management program have already been developed. Additional materials will be developed in the near future. The materials will contain guidelines for the control of sediment and siltation as well as domestic and industrial wastes, overgrazing, and other factors that may affect the quality of the river. A series of public meetings will be held to discuss the material and to obtain input from interested citizens. The meeting time and location of these meetings will be announced in newspapers. They are tentatively scheduled for:

Every 10 days	July 18, 1977
Weekdays	July 19, 1977
Weekends	July 20, 1977
